**Kimball Hill Homes selects AirToolz Software for national roll-out of AirWavz construction scheduling and communications solution**

**April 10, 2006 – Tempe, Arizona - AirToolz Software**, provider of the AirWavz construction scheduling and communications solution is pleased to announce an enterprise-wide software agreement with Kimball Hill Homes. Based in Rolling Meadows, Illinois, Kimball Hill Homes® is a top 25 U.S. homebuilder with revenues in fiscal 2005 over \$1.1 billion. Known for its award-winning designs for new homes and neighborhoods in nine states and 17 major markets, the company chose to expand a successful regional partnership into a national agreement with AirToolz Software.

“AirWavz gives Kimball Hill Homes the power of the construction trailer in the palm of our hands,” said Tom Brick, Vice President of Construction and Quality Initiatives at Kimball Hill. “AirWavz has established proven value and return on investment within our Northern California markets and we look forward to realizing the benefits enterprise-wide”.

The AirToolz Software solution uniquely offers builders the best of both worlds: a reliable handheld piece providing instant response without a wireless connection; and a web-based portion which gives management visibility into all aspects of the build process such as build schedule changes, slippage and trade performance reports. By implementing AirWavz technology nationwide, Kimball Hill Homes will continue a track record of success with AirWavz through improved schedule efficiency, reduced operating expenses, build cycle timesavings and detailed performance reporting throughout the entire build process.

“AirToolz Software offers us best of breed scheduling software built on a robust and scalable enterprise platform,” said Frank Scaramuzza, Chief Information Officer at Kimball Hill. “AirWavz is integrated into our back-office system using Web Services, giving Kimball Hill a best in class application with some great benefits.”

Surveys of current Kimball Hill users conclude that the AirWavz handheld responds instantly and is easy to use, providing a true stand-alone, connection-free electronic walkbook. The AirWavz handheld allows construction managers to spend more time walking homes and less time in the trailer working on administrative tasks. Some of the field staff for Kimball Hill are reportedly spending 2-3 hours less per day in the trailer, allowing them to spend more time walking their homes.

“Unlike other wireless solutions, AirWavz provides proven handheld ease of use and instant data response times by functioning independently, without requiring a constant wireless connection,” said Bela Lestar, CEO of AirToolz Software, “The AirWavz system improves trade relationships and accountability by communicating key information such as schedule changes, repair memos, and checklists directly to subcontractors via email or fax.”
