

*The proven leader in construction scheduling and communications*

**\*\*\*FOR IMMEDIATE RELEASE\*\*\***

**AirToolz Software helps production homebuilders lower costs and increase scheduling productivity with greater choice of mobile devices**

**August 25, 2006 – Tempe, Arizona - AirToolz Software**, provider of the proven AirWavz construction scheduling and communications solution for production homebuilders is pleased to announce support for the Microsoft Windows Mobile 5.0 platform. Both Palm OS 5.4 and Microsoft Windows Mobile 5.0 are supported with the latest release. AirWavz Mobile is the handheld component of the AirWavz builder scheduling solution that provides superintendents and construction managers with on-site access to detailed construction.

“With the recent market slowdown, builders must effectively do more with less. AirWavz scheduling allows builders to increase quality and productivity while lowering costs. Builders now have more flexibility and greater choice of handheld devices for AirWavz Mobile functionality such as field messaging, task date changes and build schedule data access,” said Bela Lestar, CEO and founder of AirToolz Software. “Currently we have certified our software on the Treo 700W, Dell Axim and HP IPAQ. We plan to add additional devices based on builder demand.”

DR Horton Phoenix’s Urban Living series is a satisfied client that has successfully implemented AirWavz using the Treo 700W in the field. AirWavz Mobile gives builder superintendents the ability to work effectively while walking the construction jobsite. Surveys of existing builder clients show that superintendents save 1-3 hours per day of administrative trailer time by leveraging AirWavz Mobile. This measurable productivity increase allows superintendents to focus on improving quality, increasing subcontractor accountability and ensuring build schedule accuracy.

**About AirToolz Software:**

AirToolz Software has been providing the residential building market with proven construction scheduling and communication solutions for over six years. AirToolz provides builders and their trade partners with solutions that improve the consistency of the building process, increase accountability between the participants, lower costs and increase profits. AirToolz is committed to ensuring builders’ success and value with best of breed and proven easy to use handheld and web-based software solutions. AirToolz is revolutionizing homebuilding with wireless communication tools that streamline all phases of the building process.

Founded in 2000, AirToolz is headquartered in Arizona, one of the fastest growing real estate markets in the US. Visit AirToolz at [www.AirToolz.com](http://www.AirToolz.com).
